RF BROADBAND CONNECTOR
CORE PRODUCTS
Contents

Corning offers a comprehensive line of hardline and drop connectors, and accessories, for cable television and broadband communications systems. Our product portfolio addresses the challenges installers face in the field, from physical barriers around installation sites to adverse weather conditions. That's why our products are built with features that enable fast and easy installation, such as compression connectors requiring a low activation force. Additionally, many of our drop connectors are also weather-resistant and can be used both indoors and outdoors to reduce the need to stock multiple designs.

Product Portfolio

We understand that not every network is the same, so your needs drive our solution offerings. Whether you want to evolve your headend to accommodate more fiber, expand your HFC network, bring fiber to your customers with radio frequency overglass (RFoG) or a passive optical network (PON), we can help you move in the right direction.

HFC Network Architecture

In HFC applications like fiber deep or node+X, the RF connectivity choices you make at your headend, node, amp, and tap can dramatically impact your network's bottom line starting on day one and extending throughout its lifespan. We address your specific needs through a comprehensive portfolio of two-piece and three-piece hardline connectors and accessories, as well as continuity-type drop connectors.

Hardline Connectors

Network connection is critical. Downtime increases truck roles and affects customer experience. Our hardline connectors offer the performance, ease of use, and reliability required in today's HFC networks.

Hardline Configurator

Corning works hard to provide tools and resources that make your jobs easier. The hardline configurator allows you to easily combine style, size, type, and cable type, creating a two-piece or three-piece hardline configurator that fits your needs.
